

# THE COMPANY MISSION

# TCF: the company mission

The customer satisfaction, reached by supplying high-quality air-handling units, carefully selected and manufactured following the specific requests of the client.

# TCF: the company mission HOW (1)

By creating personal relationships between the manufacturer and the user based on correctness and transparency, to face the difficulties with which the competitive world of business faces us every day.

# TCF: the company mission HOW (2)

By being able to listen and understand the customer's needs, expressed or understated, in order to prevent unwanted situations connected to a superficial approach to the product to be supplied.

# TCF: the company mission HOW (3)

By designing AHUs customised on the specific request of the client, thus solving problems of installation in narrow spaces or of extremely complex executions.

# TCF: the company mission HOW (4)

By offering numberless personalised solutions maintaining one unique standard: quality, thanks to our experience and continuous technical reserach.

# TCF: the company mission HOW (5)

By always favouring cutting-edge technical choices thanks to the cooperation with the primary components manufactures present on the market, which at TCF's often test their prototypes before releasing them officially to the market.

# TCF: the company mission HOW (6)

By offering the experience of concrete solutions executed over 35 years in the field of ventilation and air handling.

# THE TCF SOLUTIONS

# THE TCF SOLUTIONS (1/4)

## Industrial and Civil Air-Conditioning

Solutions for offices, banks, shopping malls, hotels and residential buildings, with heat recovery of medium, high and very high efficiency (up to 92%) to satisfy even the most recent norms in terms of energy saving.

# THE TCF SOLUTIONS (2/4)

## Hospital Applications

Units manufactured entirely in stainless steel AISI304 (panels, frames, corners, base frame, slides, screws) for thorough cleaning and sanitisation processes and accessibility to all internal components.

# THE TCF SOLUTIONS (3/4)

## Chemical-Pharmaceutical Applications

Areas with controlled bacteriological contamination, where a precise and punctual control of temperature and humidity is necessary.

Applications with high temperatures with treated air up to 100°C.

Applications with low temperatures with treated air down to -15°C.

# THE TCF SOLUTIONS (4/4)

## Food Industry

Solutions capable of guaranteeing the treatment of air inside the AHU down to  $-15^{\circ}\text{C}$  without condensing on the external panels, ideal for food processing in ham, cheese, dairy factories and preservation in freezing cells, and for all the applications where reliability and durability are the priorities.

Solutions with units produced with glass-resin panels, to allow for extreme sanitisation processes with acids in order to eliminate potential bacteria charges deriving from the processing of food.
